Graph of missed samples (lower is better)

Total detection rates (clustered in groups):

Please consider also the false alarm rates when looking at the file detection rates below.

1. AVIRA, Avast, F-Secure, Kaspersky Lab, 99.9%
Bitdefender, Emsisoft, Lavasoft,
BullGuard, ThreatTrack, Quick Heal,
eScan, Tencent
2. Fortinet, McAfee 99.8%
3. Trend Micro, AVG, ESET 99.6%
4. Sophos 99.4%
5. Microsoft 99.0%

The test-set used contained 122856 recent/prevalent samples³ from last few weeks/months.

Excellence in Information Security Testing Awards

Excellence in Information Security Testing (EIST) Awards recognize vendors for outstanding achievement in the area of information security certification testing with ICSA Labs. The award is based on a company achieving five, ten, fifteen or twenty years of continuous testing with ICSA Labs.

It takes significant vendor dedication, discipline and resources to not only navigate their product through ICSA Labs' rigorous security testing to attain certification, but to continue those efforts to maintain it. For this reason vendors who have received the 5, 10, 15 and 20 year EIST awards have demonstrated their dedication and ability to persevere through the rigors of ICSA Labs testing and maintain the quality of their security products. Veteran vendors also make greater use of ICSA Labs' testing as they work closely with technical analysts, leverage criteria for development and participate in ICSA Labs consortia – all which contribute to improved products that benefit their customers and the security ecosystem.

Congratulations to all 2016 EIST Award Winners!

For a list of individual security products that have been verified by ICSA Labs for these companies, please visit www.icsalabs.com.

Ask for ICSA Labs Certified Products

Vendors participating in ICSA Labs' certification programs benefit from the breadth and depth of twenty-five years of security product testing experience. A certification by an internationally recognized and accredited independent third-party organization with appropriate credentials immediately signifies that the product was consistently held to a high standard for quality. Ultimately, the longer a product participates in ICSA Labs' certification testing programs, the better the product.

Protección contra infecciones maliciosas (tales como virus, gusanos o troyanos)
[Más información](#)

MicroWorld eScan Internet Security Suite

Durante los meses de julio y agosto de 2016, en AV-TEST hemos examinado la configuración estándar de 23 productos de seguridad destinados a los usuarios finales. En las pruebas siempre hemos utilizado las versiones más actuales de los productos de acceso al público las cuales se pudieron actualizar en cualquier momento y también utilizar sus servicios "en la nube". Solo hemos tenido en cuenta escenarios de prueba realistas y hemos comprobado los productos contra las amenazas actuales. Los productos han tenido que demostrar sus capacidades aplicando todas sus funciones y niveles de protección.

	julio	agosto	Promedio de la industria
Protección contra ataques de día 0 provenientes de Internet, incluidos los correos electrónicos y las páginas web maliciosas (Real-World Testing) 162 samples used	98,8%	97,5%	98,0%
Detección de los malware más extendidos y más frecuentes durante las últimas 4 semanas (conjunto de referencia de AV-TEST) 15.151 samples used	99,9%	99,9%	99,0%

Resultado Protección ●●●●● 5.5/6.0
